## Hill Billy Spare Parts: *Fitting Instructions—Replacing Clutches*

---

Please read these instructions carefully. Return faulty parts that are under warranty.

---

The new clutches are marked "LEFT" and "RIGHT". Looking at your cart from the BAG SIDE, install the left clutch on the left side and the right clutch on the right side.

1. Turn the green hub, which is spring loaded, and then pull the wheel off the cart.
2. To ensure you are placing the correct clutch on the appropriate side, look inside the black housing (where the clutch pin fits) to see the very small "R" or "L". You can also double-check that you have installed the correct clutch by looking inside the black housing of the old clutch after removing it from the clutch pin.
3. Put the wheels back on the cart and test the newly installed clutches--turn the cart ON and then OFF. If the wheels stop dead, the clutches have been installed correctly. If the wheels keep turning when the cart is turned on and off again, the clutches have been installed on the wrong sides.
