
Hill Billy Spare Parts: *Information—The Hill Billy Gearbox*

Your new Hill Billy gearbox is enclosed, together with step by step [fitting instructions](#).

You may notice this replacement looks slightly different to the old unit. However, it is the correct part and fits your Hill Billy in exactly the same way. The changes have been made to make the product better in many ways.

Aside from several alterations to help us from a manufacturing aspect, from your point of view the following improvements have been made:

- It now operates more efficiently to give lower power consumption.
- There is increased pulling power when going uphill
- Greater braking when reversed for going down steep slopes.
- More ground clearance to help protect it when the terrain gets a little rough.

Once the new gearbox is fitted, and you are out on the course you may also notice a minor change in your Hill Billy's performance. The top speed is slightly reduced. This is part of the optimisation for improved power consumption. You should not find this a problem though because switched full on; the Hill Billy will still be travelling at a brisk pace.

Installation of this part should be very straight forward, but if you have any queries or experience difficulty, please feel free to call us we will be only too pleased to assist.
